

## Infectious Disease.

Premier Research has assisted many sponsors with the unique demands presented with infectious disease studies. We have successfully conducted numerous fast-paced, complex studies for the treatment of viral, fungal and bacterial diseases.

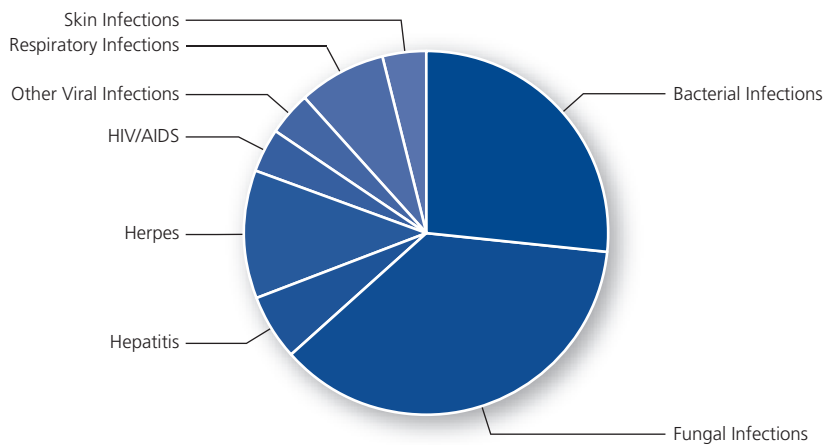

### Proven Experience

- More than 50 infectious disease clinical trials conducted in the past 5 years
- More than 16,000 patients treated in the past five years
- Dedicated research clinics with a specialty in vaccine research owned and operated by Premier Research
- Experience with viral, fungal and bacterial diseases

### Expertise: The People

- More than 30 project managers/directors and 110 CRAs experienced in infectious disease clinical research
- Long-term relationships with leading scientists, experts, and investigators in anti-viral and anti-infective research
- Expertise in the design and conduct of studies in vaccine research

### Clinical Trial Experience Within the Past 5 Years

### Case Study: Providing High Quality Data Analysis

Premier Research was contracted by an emerging pharmaceutical company to manage all aspects of a three-study anti-infective program. Premier Research exceeded start-up timelines despite this being a highly competitive therapeutic area. Our detailed investigator network and structured feasibility process allowed the selection of investigative sites that performed to pre-defined and aggressive targets.

The majority of the 150 sites required for this program were initiated within 10 weeks of study commencement. Premier Research met this challenge by centralizing and proactively managing site start-up efforts, ensuring rapid commencement of patient recruitment.

In addition to this program of studies, Premier Research has managed eight other similar Phase 2 and 3 studies involving anti-bacteria compounds, giving Premier Research a wealth of experience in this therapeutic area.
